BLG  **LOGISTICS**

MEASURABLY SPECIAL

Cars create excitement, provide for mobility and are regarded as moving symbols of progress. Automotive Logistics makes this development possible. It is a segment that is still displaying growth of gigantic proportions. The number of models, parts and suppliers is increasing at the same pace as the related demands on logistics – a cosmos of services in which XXL jobs are the order of the day. One of BLG's core competencies is being able to manage the entire value chain smoothly and reliably, even in the top speed range, in spite of this enormous complexity. After all, we are used to revving up in terms of efficiency and personal commitment and thus generating performance that more than meets the expectations.

MAKING CAPABILITIES VISIBLE

Any targeted change should make improvements perceptible. In this respect Automotive Logistics is an exception to the rule. Here BLG demonstrates qualities that are not always visible for customers. Only when no startup difficulties are discernible, when assembly or production lines and processes run virtually on their own without any frictional loss, is our core goal achieved. This results in good economic reasons for customer satisfaction that is soothing for the nerves and based on resource protection.

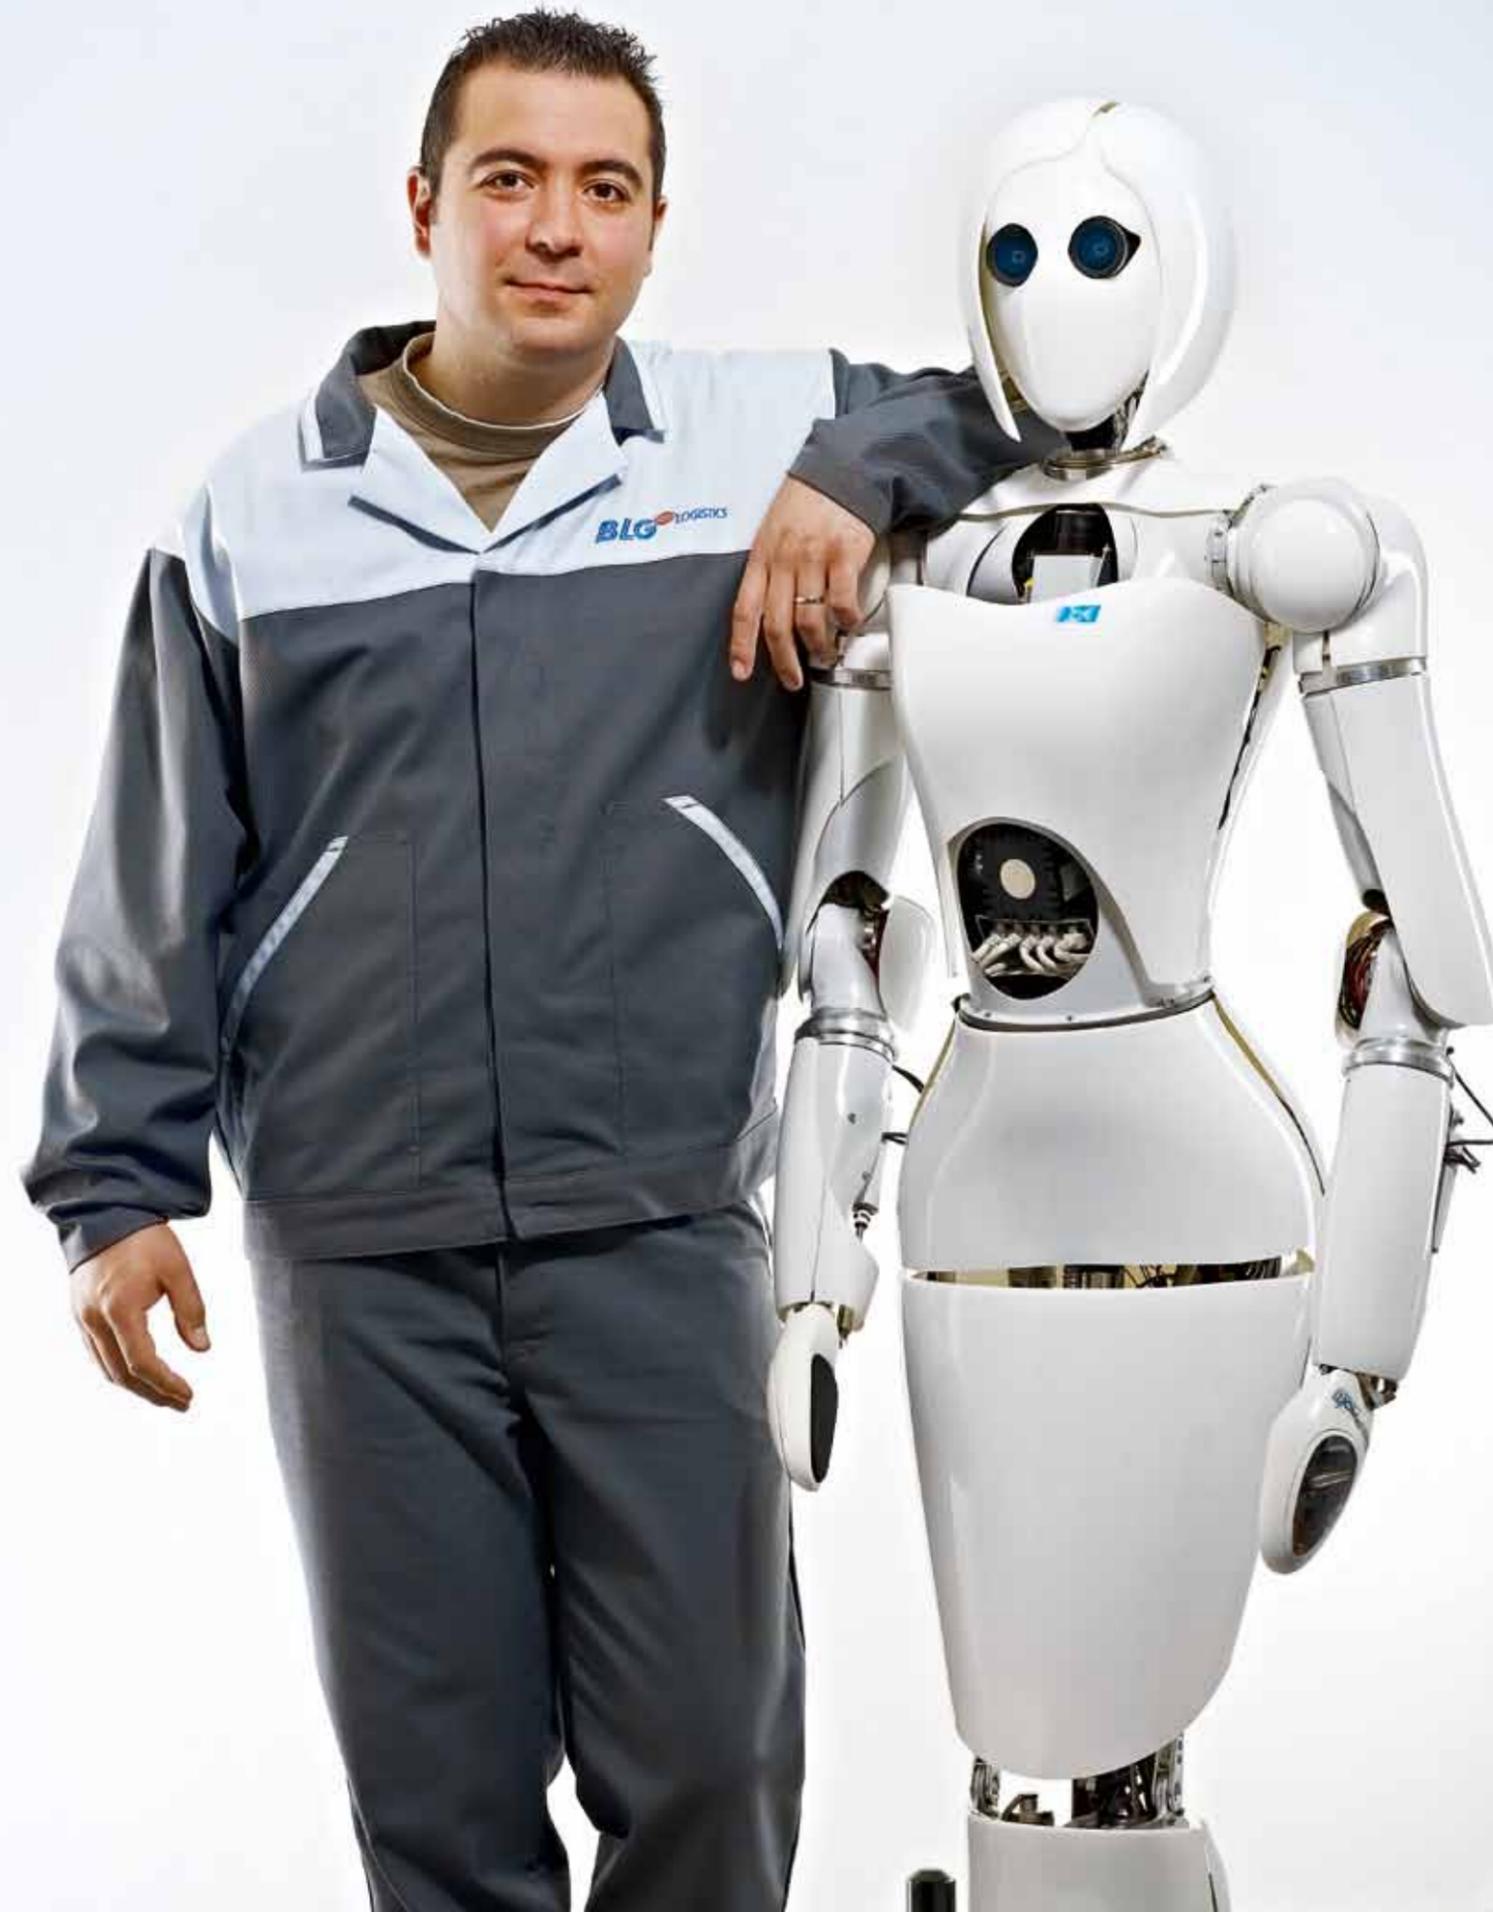

BECAUSE THE DETAILS COUNT...

The first impression counts, but it is not enough. One of our most important tasks as a logistics provider is to identify potential sources of improvement as well as possible error throughout the process chain. This holistic approach starts right from determination of the customer's needs, extends to planning and startup management and forms a secure foundation for perfect fine

tuning of all processes. Proven standardized procedures according to the modular principle on the basis of recognized methods are meticulously synchronized with individually developed optimization capabilities. As a result, we can respond rapidly and sensibly to changes of any kind – without losing sight of quality or cost.

CRAFTSMANSHIP, HIGH TECH AND SOME SPECIAL FEATURES

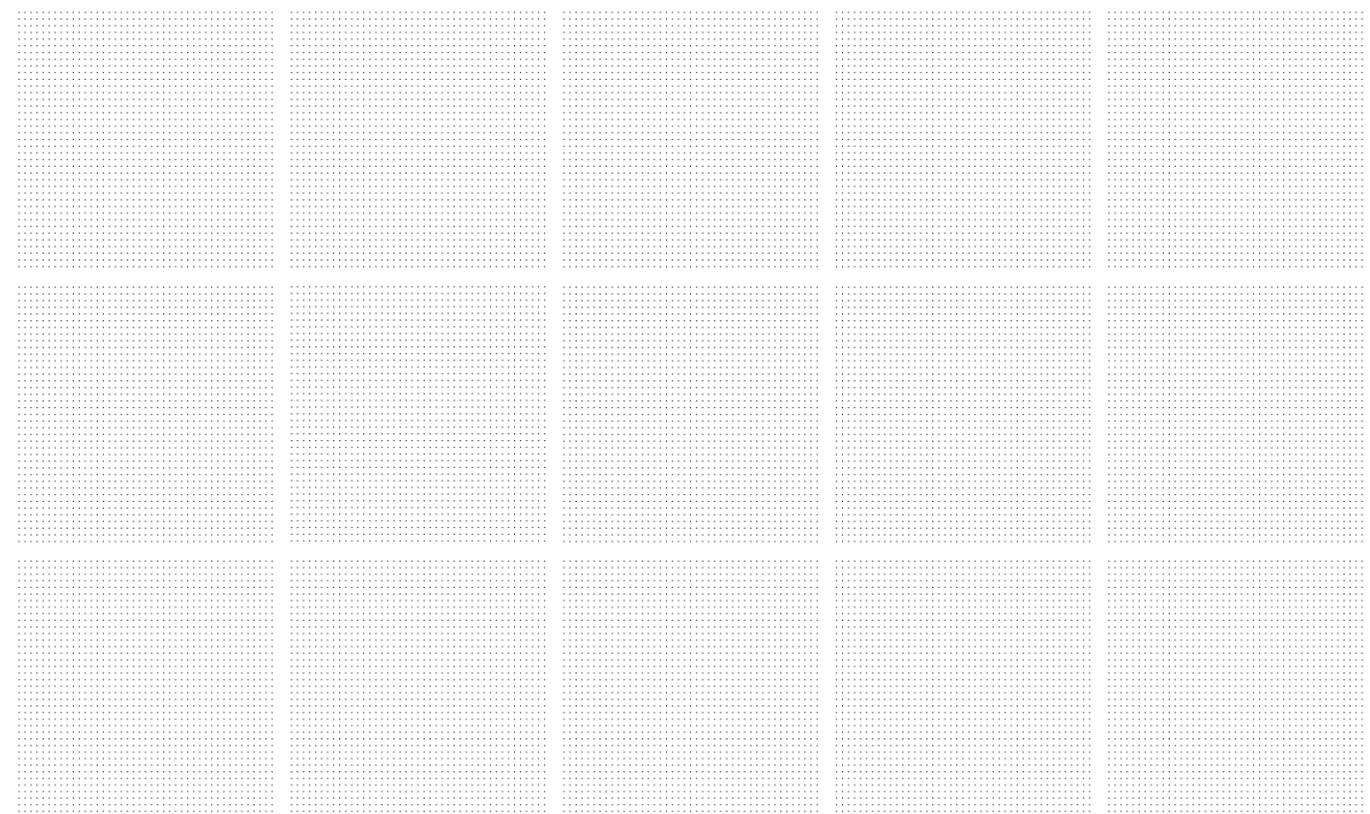

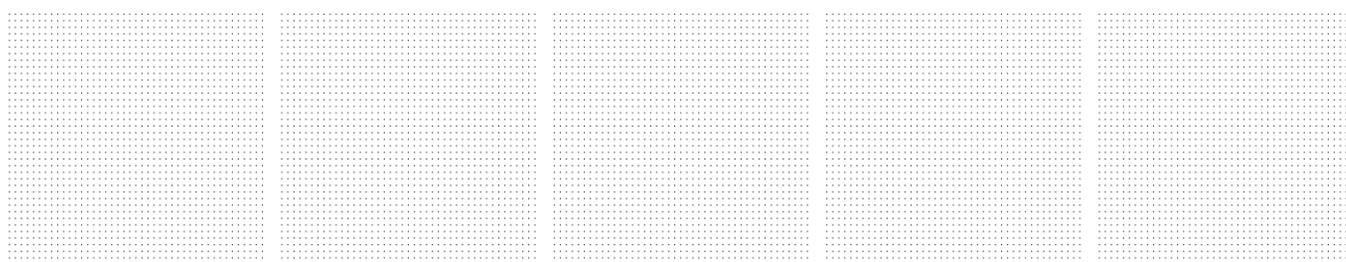

As complex and varied as our Automotive Logistics solutions may be: they are all based on the ability to constantly open up new opportunities through the close interlinkage between technology, know-how and personality. This leads to holistic concepts for analyzing processes, defining functions and time frames and specifying potential savings. Cost consciousness, thinking ahead and acting responsibly are an element of BLG's long-standing corporate culture and at the same time part of its everyday practice.

THE CORE SERVICES OF AUTOMOTIVE LOGISTICS – PERFECTION EVERY STEP OF THE WAY

The overview shows what we do. What it doesn't show: our vigilance when it comes to planning and implementation, the quality of our services and our personal commitment. Customers find that out very quickly – in talks and in results. And it's something our long-standing clients experience again and again.

CORDIAL. WELCOME.

Whether on home ground or in the international arena: BLG employees always view their responsibilities and obligations to the customer as their personal concern. They take pleasure in applying professional and communicative skills to their work – no matter what the task or where the job has to be done. This open-mindedness combined with solution-oriented thinking and action at all times overcomes technical and cultural bounds with consummate ease – and is certainly one of the major reasons for BLG’s unusually long customer relations. We cordially invite you to personally find out more about us and our work.
